Sankalp: SEO Page Content & Dummy Data Pack

*Working brand name: **Sankalp**. Find-and-replace it once you pick the final name. Amounts are shown in USDC with a rough INR equivalent at a demo rate of 1 USDC = ₹85.*

0. Read this first

- **Everything here is fictional**: people, projects, numbers, testimonials, contract addresses. Before the site is public, either label demo content clearly (for example a small “Sample project” badge) or delete it. Publishing invented testimonials or fake statistics as real is misleading, can breach consumer-protection and advertising rules, and violates Google’s spam policies.
- **Meta title** ⩽ 60 characters. **Meta description** ⩽ 155 characters. **One H1 per page.**
- Every page block below has the same fields: URL, Title tag, Meta description, H1, Keywords, Page copy, CTAs, Schema, Internal links.
- The matching **seed data file** (`sankalp-seed-data.json`) contains the projects, creators, categories, milestones, contributions, FAQs, blog posts and testimonials used in these pages, ready to import into Firestore.
- Tone of voice: clear, calm, honest, never hype. No “guaranteed returns”, no “get rich”, no promises about outcomes. Always say funds are protected by rules in a smart contract, not by magic.

1. Site-wide SEO settings

Item	Value
Title template	`%s | Sankalp`
Default title	Sankalp: Milestone-Based Crowdfunding on Blockchain
Tagline	Fund ideas that keep their promises.
Default OG image	1200×630, brand colour background, logo, tagline
Twitter card	`summary_large_image`
Language	`en-IN` (add `hi-IN`, `mr-IN` later with hreflang)
Canonical	Always absolute, no trailing slash, no query strings

Item	Value
Robots	Index public pages. `noindex` for dashboards, admin, auth, drafts, search-result pages with filters
Sitemap	`/sitemap.xml`, dynamic: static pages + live projects + categories + creators + blog
Organization schema	Name Sankalp, logo, sameAs (X, LinkedIn, GitHub), contactPoint support email

---

2. Public pages

2.1 Home: `/`

- **Title tag:** Sankalp: Milestone-Based Crowdfunding on Blockchain *(52)*
- **Meta description:** Back student, community and startup projects with smart-contract protection. Funds release on milestones, with refunds if goals aren't met. *(150)*
- **H1:** Crowdfunding that keeps its promises
- **Keywords:** blockchain crowdfunding platform, decentralized crowdfunding, crypto crowdfunding India, milestone-based funding
- **Schema:** Organization, WebSite (SearchAction), FAQPage (for the FAQ teaser)

Hero

> **Crowdfunding that keeps its promises.** Back projects you believe in. Your contribution is held by a smart contract on the Monad blockchain and released to the creator only as they reach agreed milestones. If a project falls short, you can claim your refund.
>
> [Explore projects] [Start a project]

Trust strip (small text under hero): Funds held by smart contract · Milestone-based release · Refunds if the goal isn't met · Every transaction publicly verifiable

Stats strip (sample data)

128	$412,600	9,340	94%
Projects funded	Raised by the community	Backers	Milestones delivered on time

How it works (3 steps)

1. **Find a project.** Browse student ideas, community causes, hardware, art and small businesses. Read the story, the milestones and the risks.
2. **Contribute from your wallet.** Connect a wallet and contribute in USDC. Your money goes into the project's smart contract, not to the creator directly.
3. **Watch it get built.** Creators unlock funds by completing milestones. You see every update and every release on-chain.

Featured projects: show 3 cards from the seed data (Pocket Lab, Harbour Light Library, SolarStack Mini).

Browse by category: 8 category tiles with project counts.

Why Sankalp (4 blocks)

- **Milestone protection.** Creators receive funds in stages, as work is verified.
- **Refunds built in.** If a campaign misses its goal, contributors can reclaim their funds from the contract.
- **Transparent by default.** Anyone can verify balances and releases on a public block explorer.
- **Low, simple fees.** A flat 3% platform fee on successful campaigns. No hidden charges.

Sample testimonials *(fictional, label as demo)*

- "I backed three projects and could see exactly when each milestone was released. It feels honest." *Anika R., sample backer, Pune*
- "Our school lab kit got funded in 19 days. Releasing funds in stages kept us disciplined." *Rohan D., sample creator, Nashik*

FAQ teaser (3 questions, link to /faq)

- Is my money safe? / What happens if a project fails? / Do I need crypto experience?

Final CTA: Have an idea that deserves a community? **Start a project in minutes.**

Internal links: /explore, /how-it-works, /for-creators, /for-donors, /trust-and-safety, /faq

---

2.2 Explore / Project listing: `/explore`

- **Title tag:** Explore Crowdfunding Projects | Sankalp *(44)*
- **Meta description:** Discover student, community, tech and creative projects raising funds with milestone protection. Filter by category, goal and time left. *(142)*
- **H1:** Explore projects worth backing
- **Keywords:** crowdfunding projects India, fund a project online, support student projects, browse crowdfunding campaigns
- **Schema:** CollectionPage + ItemList (first 12 projects), BreadcrumbList

- **Indexing:** the base page is indexable. Filtered and sorted URLs use `noindex, follow` with the canonical pointing to `/explore`.

Intro paragraph (SEO text, above the grid): Every project here is reviewed before it goes live, and every contribution is held in a smart contract until the creator completes the agreed milestones. Browse by category, see how much has been raised, how many milestones are done, and how many days remain. Found something you like? Connect a wallet and back it in under a minute.

Controls: Search ("Search projects, creators, topics"), Category, Status (Live · Funded · Ending soon), Funding progress, Sort (Trending · Newest · Ending soon · Most funded).

Card fields: cover image, category tag, title, one-line summary, creator name, raised / goal, % funded, backers, days left, milestones done (e.g. 1 of 3).

Empty state: *No projects match these filters yet.* Try removing a filter, or **start the first project in this category**.

Pagination: 12 per page, "Load more" button plus crawlable `?page=2` links.

2.3 Category pages: `/category/[slug]`

Template: **Title** = `{Category} Crowdfunding Projects | Sankalp` · **H1** = `{Category} projects` · intro (40–70 words) · project grid · "Start a {category} project" CTA · 3 category FAQs · related categories.

Slug	H1	Meta description (≤155)	Intro (40 words)
education-students	Education & student projects	Fund student research, school labs and learning tools. Milestone-protected crowdfunding for education projects across India.	Back classrooms, labs and student teams building something useful. Each project lists clear milestones, so you can see learning tools and prototypes take shape as funds are released.

Slug	H1	Meta description (≤155)	Intro (40 words)
technology-hardware	Technology & hardware projects	Back open-source tools, IoT devices and maker hardware. Contributions are held in smart contracts and released on milestones.	From sensors to software, support makers who share their designs. Hardware projects publish prototypes, test results and bills of materials at every milestone.
community-social	Community & social causes	Support neighbourhood libraries, clean-ups and local initiatives with transparent, milestone-based crowdfunding.	Fund the things that make a neighbourhood better. Community projects show exactly how each stage of funding is spent, with photos and receipts.
arts-culture	Arts & culture projects	Help musicians, filmmakers, writers and artists bring work to life through protected crowdfunding.	Back independent creators and get closer to the work. Creators share drafts, behind-the-scenes updates and rewards as milestones are met.
environment-sustainability	Environment & sustainability projects	Fund tree planting, solar, waste reduction and clean-energy projects with transparent milestone releases.	Support practical climate and clean-up work. Creators report measurable outcomes, such as trees planted or kilowatts installed, at each milestone.
small-business-startups	Small business & startup projects	Help local businesses and early startups raise seed funding with milestone-based release and public proof of progress.	Back founders building small businesses. Reward-based campaigns let you pre-order products or services while funds are released in stages.

Slug	H1	Meta description (≤155)	Intro (40 words)
science-research	Science & research projects	Crowdfund open science, citizen research and field studies with transparent budgets and milestone reporting.	Support curious people doing careful work. Researchers publish methods and results, and funds release as data is collected and shared.
health-wellbeing	Health & wellbeing projects	Fund community wellness, mental-health awareness and fitness initiatives. Not for individual medical treatment.	Back programmes that help communities stay well. Individual medical fundraising is not supported on Sankalp in this version.

> **Policy note:** decide before launch whether personal medical fundraising is allowed. It carries the highest fraud and compliance risk, so the sample copy above excludes it.

2.4 Project detail: `/projects/[slug]`

Templates

- **Title tag:** `{Project title} | Fund on Sankalp` (trim the title to fit 60 characters)
- **Meta description:** `{One-line summary} Raised {X} of {goal}. {N} days left. Funds protected by smart contract.`
- **H1:** the project title
- **Schema:** BreadcrumbList, plus `Project`-style structured data using `Organization` / `Person` for the creator, `DonateAction` for the contribute action, and an `Article` for each update. Add `aggregateRating` **only** if you ever collect real, verifiable reviews.
- **OG image:** auto-generated (cover, title, progress bar, raised/goal).

Page layout: hero (cover, title, creator, category, progress bar, contribute box) → tabs: **Story · Milestones · Updates · Backers · Comments · On-chain proof** → risks → FAQ → related projects.

Full sample page: Pocket Lab

- **URL:** `/projects/pocket-lab-science-kits-village-schools`
- **Title tag:** Pocket Lab: Science Kits for 40 Village Schools | Sankalp

- **Meta description:** Help bring hands-on science kits to 40 village schools. $8,400 raised of $12,000, 17 days left. Funds protected by smart contract.
- **H1:** Pocket Lab: Low-Cost Science Kits for 40 Village Schools
- **Summary:** Hands-on physics and chemistry kits, built from locally sourced parts, for classes 6 to 8.
- **Goal:** 12,000 USDC (about ₹10.2 lakh) · **Raised:** 8,400 USDC (70%) · **Backers:** 213 · **Days left:** 17 · **Milestones released:** 1 of 3

Story

Most village schools we visited had a lab room but no equipment. Students learn about circuits and chemical reactions from the blackboard and never touch a battery. Pocket Lab changes that with a kit that costs about ₹2,500 to build, fits in a school bag, and covers 20 experiments from the state curriculum.

Our team of four engineering students has tested a prototype kit with 120 students in two schools. Test scores on practical questions rose by an average of 22%. Now we want to build and deliver 40 kits, train one teacher per school, and publish all designs openly so anyone can copy them.

What the money pays for

Item	Amount
Components and packaging for 40 kits	$6,900
Teacher training workshops (8 sessions)	$2,400
Transport and delivery	$1,300
Documentation and open-source release	$600
Platform fee (3%) and contingency	$800

Milestones

1. **Kits built and tested** · 30% · $3,600 · Target date 30 days after funding. *Proof: photos of 40 assembled kits, test report.* Status: **Released**.
2. **Kits delivered and teachers trained** · 50% · $6,000 · Target date 75 days. *Proof: signed receipts from schools, workshop photos.* Status: Pending.
3. **Open-source release and impact report** · 20% · $2,400 · Target date 100 days. *Proof: public repository link, student results summary.* Status: Locked.

Risks and challenges

Component prices may rise, so we kept a contingency. School calendars can delay deliveries, so we scheduled around exams. If we raise less than the goal, the contract refunds everyone, and we will not build a smaller version without a new campaign.

Sample updates

- *Day 12:* All 40 PCB batches arrived. Photos of the soldering session are attached.
- *Day 20:* Milestone 1 submitted. Test report published. Awaiting review.

Project FAQ

- *Who gets the money?* The project's smart contract holds it. The creator can only withdraw released milestones.
- *What if the goal is not reached?* Every backer can claim a full refund.
- *Can I see where my contribution went?* Yes, every contribution and release is shown in the On-chain proof tab with a block-explorer link.

Contribute box microcopy: *Contribute amount (USDC)* · quick amounts 10 / 25 / 50 / 100 · *You will confirm one transaction in your wallet. You can claim a refund if the goal is not met by the deadline.*

2.5 Creator public profile: `/creators/[handle]`

- **Title tag:** `{Name}: Creator Profile | Sankalp`
- **Meta description:** `{Name} has launched {N} projects on Sankalp and raised {amount}. See their work, milestones delivered and updates.`
- **H1:** the creator's name
- **Schema:** ProfilePage with Person, BreadcrumbList

Sample: Aarav Kulkarni *(fictional)*

- **URL:** `/creators/aarav-kulkarni`
- **Bio:** Final-year electronics student and open-hardware maker from Nashik. Leads the Pocket Lab team.
- **Stats:** 2 projects · $15,900 raised · 5 of 6 milestones delivered · Verified creator (identity checked) · Joined March 2026
- **Projects:** Pocket Lab (Live), LED Lantern Kit (Completed)
- **Trust panel:** Identity verified · Wallet connected · 0 reports · Milestone delivery rate 83%

2.6 How it works: `/how-it-works`

- **Title tag:** How Sankalp Works: Milestone Crowdfunding Explained *(54)*

- **Meta description:** See how contributions are held by smart contracts, released on milestones and refunded if goals aren't met. A simple guide for backers and creators. *(150)*
- **H1:** How Sankalp works
- **Keywords:** how does blockchain crowdfunding work, milestone based funding, smart contract escrow crowdfunding
- **Schema:** HowTo (two flows), FAQPage, BreadcrumbList

Intro: Sankalp is crowdfunding with one big difference. Contributions don't go straight to the creator. They are held by a smart contract, a small program on the Monad blockchain, which follows rules everyone can read.

For backers: 4 steps

1. **Choose a project.** Read the story, milestones and risks.
2. **Connect your wallet.** Use MetaMask, Rabby, WalletConnect or another supported wallet. You keep control of your keys.
3. **Contribute in USDC.** Confirm one transaction. Your contribution appears on the project page.
4. **Follow progress.** Get updates, see each milestone released, or claim a refund if the goal is missed.

For creators: 5 steps

1. **Apply and verify.** Create a profile and complete a one-time identity check.
2. **Plan your milestones.** Break your budget into 2 to 5 stages with proof for each.
3. **Submit for review.** Our team checks your project against our rules.
4. **Go live.** Your campaign contract is created and runs until the deadline.
5. **Deliver and withdraw.** Submit proof for each milestone. Once approved, that portion unlocks.

What if something goes wrong? Short section on refunds, disputes, and the pause feature, linking to /trust-and-safety.

Internal links: /for-creators, /for-donors, /trust-and-safety, /fees, /faq

---

2.7 For creators: `/for-creators`

- **Title tag:** Start a Crowdfunding Campaign for Your Project | Sankalp *(≈55)*
- **Meta description:** Raise funds with a community that sees your progress. Milestone-based release, a flat 3% fee and no upfront cost. Start in minutes. *(≈135)*
- **H1:** Raise funds from people who believe in your work

- **Keywords:** how to start a crowdfunding campaign, crowdfunding for students, raise money for my project India
- **Schema:** WebPage, FAQPage, BreadcrumbList

Sections

- **Why creators choose Sankalp:** no upfront cost; a flat 3% only on successful campaigns; funds are released as you hit milestones, which builds backer trust; own your community with public profiles and updates.
- **What you need before you start:** a clear idea, a realistic budget, 2 to 5 milestones with proof, a wallet, and a one-time identity check.
- **What makes a campaign succeed (checklist):** a clear one-line summary; a cover image and short video; honest risks; a goal based on real costs; weekly updates; sharing with your first 30 supporters before launch.
- **What you can't fundraise for:** illegal activity, weapons, gambling, adult content, investment or profit-sharing offers, and individual medical treatment. Full list in the Prohibited Projects page.
- **CTA: Start your project.** · Secondary: *Read the creator guide*

2.8 For donors / backers: `/for-donors`

- **Title tag:** Back Projects with Confidence | Sankalp for Backers *(≈53)*
- **Meta description:** Contribute in USDC, follow every milestone and claim a refund if a goal is missed. Learn how Sankalp protects backers. *(≈125)*
- **H1:** Back projects with confidence
- **Keywords:** donate with crypto, transparent donation platform, refund crowdfunding, safe crowdfunding

Sections

- **New to crypto? Start here:** 1) install a wallet, 2) add USDC (buy through a supported on-ramp), 3) switch to the Monad network (we show a one-click helper), 4) contribute. Estimated time: 10 minutes the first time.
- **How your money is protected:** held by the contract; creators can only withdraw approved milestones; unfinished campaigns refund; all transactions are public.
- **What backers should know (honest risks):** crowdfunding projects can be delayed or can fail; contract code can have bugs even when audited; crypto values and wallet security are your responsibility. Link to /risk-disclosure.
- **CTA: Explore projects**

2.9 Trust & safety: `/trust-and-safety`

- **Title tag:** Trust & Safety: How Sankalp Protects Backers *(≈51)*
- **Meta description:** Smart-contract escrow, milestone release, creator verification and public audits. See exactly how we protect contributions. *(≈125)*
- **H1:** How we protect your contribution
- **Keywords:** is crypto crowdfunding safe, crowdfunding scam protection, smart contract escrow
- **Schema:** WebPage, FAQPage

Sections (each with a short paragraph and an icon)

1. **Smart-contract escrow.** Your contribution is held by the project's contract, not by Sankalp staff or the creator. The code is published and verified on the block explorer.
2. **Milestone release.** The creator withdraws only the share linked to an approved milestone. Anything not yet released stays locked.
3. **Automatic refunds.** If a campaign misses its goal by the deadline, each backer can claim a full refund from the contract. If a campaign is cancelled, the same applies to unreleased funds.
4. **Creator verification.** Creators complete an identity check through a regulated verification provider. We do not store identity documents on Sankalp or on the blockchain.
5. **Project review.** Every project is reviewed against our rules before launch. We check that the budget is realistic, the milestones are verifiable and the project is allowed.
6. **Emergency pause.** If we find a problem, a multi-signature admin wallet can pause new contributions. Refund and withdrawal rules cannot be changed by one person.
7. **Independent audit.** *(Add the real auditor, date and report link here once completed. Do not publish this section before it is true.)*
8. **Report a project.** Every page has a Report button. Our team reviews reports within 48 hours.

Honest limits box: No platform can remove all risk. Projects can be late, change scope or fail. Smart contracts can contain bugs even after audits. You are responsible for the security of your own wallet. Read the full Risk Disclosure.

2.10 Fees & pricing: `/fees`

- **Title tag:** Fees & Pricing: Flat 3% Platform Fee | Sankalp *(≈48)*
- **Meta description:** No setup cost. Sankalp charges a flat 3% only on successfully funded campaigns. See a clear example and what network fees to expect. *(≈140)*
- **H1:** Simple, transparent fees

- **Keywords:** crowdfunding platform fees India, low fee crowdfunding, crypto crowdfunding fees

	Backers	Creators
Account	Free	Free
Platform fee	None	3% of funds raised, only if the campaign succeeds
Network (gas) fee	Small, paid in MON to confirm the transaction	Small, paid when withdrawing
Failed campaign	Full refund of contribution	No fee

Worked example: A campaign raises 10,000 USDC. The 3% platform fee is 300 USDC, so the creator receives 9,700 USDC across the milestones. A backer who contributed 100 USDC pays no fee at all.

Notes: Network fees on Monad are usually small, but they are set by the network, not by us. Fiat on-ramp providers charge their own fees. Verify the numbers against your final fee settings before publishing.

2.11 FAQ / Help centre: `/faq` (and `/help/[article]`)

- **Title tag:** FAQ: Crowdfunding on Sankalp Answered | Sankalp *(≈51)*
- **Meta description:** Answers to common questions about contributions, refunds, wallets, fees, milestones and how to start a project on Sankalp. *(≈130)*
- **H1:** Frequently asked questions
- **Schema:** FAQPage (all questions below)

Backers

1. **Is my money safe?** Your contribution is held by a smart contract and released to the creator only after milestones are approved. No system is risk-free: see our Risk Disclosure for the limits.
2. **What happens if a project doesn't reach its goal?** The campaign fails and every backer can claim a full refund from the contract.
3. **What happens if a creator doesn't deliver a milestone?** Funds for that milestone stay locked. Our team reviews the case, and backers can be refunded the unreleased balance if the project is cancelled.

4. **Do I need to understand crypto to contribute?** You need a wallet and USDC. Our guide walks you through it in about 10 minutes.
5. **Which wallets work?** MetaMask, Rabby, WalletConnect-compatible wallets and others. We show a live list on the Connect page.
6. **Why do I need MON as well as USDC?** MON pays the small network fee for each transaction on Monad.
7. **Can I contribute in rupees?** Not directly. You can buy USDC through a supported on-ramp, and we link to options that operate in India. Check each provider's requirements.
8. **Can I get a refund after the campaign is funded?** Contributions to a successful campaign are held for the project. Unreleased funds are refunded only if the project is cancelled.
9. **Are contributions tax-deductible?** Not generally. Tax treatment depends on your situation, so please consult a qualified adviser.

Creators

10. **How much does it cost to start?** Nothing upfront. We charge 3% on successfully funded campaigns.
11. **How are funds released to me?** You submit proof for each milestone. After approval, that portion becomes withdrawable from the contract.
12. **Can I change my goal or deadline after launch?** No. Rules are fixed at launch to protect backers. You can post updates and, in exceptional cases, request a cancellation.
13. **Who can start a project?** Anyone aged 18 or older who passes verification and whose project follows our rules.
14. **What projects are not allowed?** Illegal items, weapons, gambling, adult content, investment or profit-sharing offers, and individual medical fundraising.
15. **How long does review take?** Typically 2 to 5 working days.

2.12 About: `/about`

- **Title tag:** About Sankalp: Our Mission and Team *(≈38)*
- **Meta description:** Sankalp is a milestone-based crowdfunding platform built on blockchain to make community funding more transparent and trustworthy. *(≈135)*
- **H1:** We're building crowdfunding people can trust
- **Schema:** AboutPage, Organization

Mission: Make it easy to fund good ideas and hard to misuse the money.

Why we started: *(Rewrite in your team's real voice.)* Many crowdfunding campaigns collect money first and explain later. We wanted a model where promises are tied to rules that everyone can inspect, so backers can see what is delivered and creators can earn trust step by step.

Our principles: transparency, shared responsibility, simplicity, honesty about risk.

Team section: use real photos, names, roles and links. *(Do not use stock faces or fake team members.)*

2.13 Blog index and posts: `/blog` , `/blog/[slug]`

- **Index title tag:** Sankalp Blog: Crowdfunding Guides and Updates
- **Index meta description:** Practical guides on running a crowdfunding campaign, understanding blockchain funding and getting started with wallets.
- **H1:** Guides and stories
- **Schema:** Blog, Article (per post), BreadcrumbList

Launch posts (target 1,200 to 1,800 words each, with a table of contents, FAQ section and internal links)

Creator verification	Provider status, last checked, re-verify

Page	Sample content
Reports & moderation	Report type, reporter, target, status, notes; actions: dismiss, hide, escalate
Categories	Add, edit, reorder, SEO title and description per category
Featured / homepage	Pick 3 featured projects, hero stats, announcement banner
Fee & contract settings	Read-only values (fee 3%, token whitelist, paused: no) with a link to the multisig for changes
Audit log	Time, admin, action, target, before/after
Analytics	Volume, new creators, success rate, refunds issued, traffic

Sample rejection reasons (templates): Goal does not match budget · Milestones are not verifiable · Prohibited category · Insufficient identity verification · Misleading claims.

---

7. Legal and system pages

Set `noindex` only on the 404 and 500 pages. The legal pages should be indexed and linked from the footer.

Page	URL	Title tag	What it must cover	Note
Terms of Service	`/terms`	Terms of Service | Sankalp	Who can use the platform, roles, fees, prohibited conduct, dispute handling, liability limits, governing law	Needs a lawyer's review

Page	URL	Title tag	What it must cover	Note
Privacy Policy	`/privacy`	Privacy Policy | Sankalp	What data is collected (wallet address, email, profile, analytics), why, retention, deletion rights, and that blockchain data cannot be deleted	Align with India's DPDP Act
Cookie Policy	`/cookies`	Cookie Policy | Sankalp	Categories, purposes, how to change choices	Add a consent banner for non-essential cookies
Risk Disclosure	`/risk-disclosure`	Risk Disclosure | Sankalp	Project delay or failure, smart-contract risk, wallet security, price volatility, regulatory change	Plain language, prominent link on every contribute box
Prohibited Projects	`/prohibited-projects`	Prohibited Projects | Sankalp	The full list of disallowed categories, with examples	Keep in sync with the FAQ
Refund Policy	`/refund-policy`	Refund Policy | Sankalp	When refunds apply, how to claim, what is not refundable, timing	Must match the contract behaviour exactly

> **Important:** these are outlines of what to cover, not legal text. Have a qualified lawyer draft or review the final versions, especially the Terms, the Risk Disclosure and anything about regulation.

404 page: H1 *We couldn't find that page.* Copy: *The link may be broken or the project may have ended.* Buttons: Explore projects · Go home. Include a search box.

500 page: H1 *Something went wrong on our side.* Copy: *Please try again in a moment. Your funds are safe: they are held by smart contracts, not by this website.* Button: Try again · Contact support.

Maintenance banner: *Contributions are temporarily paused while we run maintenance. Refunds and withdrawals remain available.* (Only true if the contract is built that way. Verify first.)

---

8. Emails and notifications (sample copy)

Trigger	Subject	Body (short)
Contribution confirmed	You backed {Project}	Thanks for backing {Project} with {amount} USDC. Your contribution is held by the project's smart contract. View transaction: {link}.
Milestone released	{Project}: milestone {n} released	{Creator} completed milestone {n}: {title}. {amount} USDC was released. See the proof: {link}.
Goal reached	{Project} is fully funded	The goal of {goal} USDC was reached. Funds will be released as milestones are completed.
Goal missed	{Project} did not reach its goal	The campaign ended below its goal. You can claim a full refund: {link}.
Creator: project approved	Your project is approved	Your project passed review. Deploy your campaign contract to go live: {link}.
Creator: changes requested	Changes needed on {Project}	Our reviewers left comments. Update your project and resubmit: {link}.
Creator: milestone approved	Milestone approved	{amount} USDC is now available to withdraw from your dashboard.
Security notice	Never share your seed phrase	We will never ask for your seed phrase or private key. Report suspicious messages to {email}.

9. Technical SEO snippets

robots.txt

```
User-agent: *
Allow: /
Disallow: /dashboard/
Disallow: /creator/
Disallow: /connect
Disallow: /onboarding
Disallow: /api/
Sitemap: https://YOUR-DOMAIN/sitemap.xml
```

The admin app lives on a separate subdomain with its own `robots.txt` that disallows everything, and it is also protected by login. Robots rules are not security.

Sample JSON-LD: Organization

```
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "name": "Sankalp",
  "url": "https://YOUR-DOMAIN",
  "logo": "https://YOUR-DOMAIN/logo.png",
  "sameAs": ["https://x.com/sankalp",
"https://www.linkedin.com/company/sankalp"]
}
```

Sample JSON-LD: FAQPage (use real questions from the FAQ)

```
{
  "@context": "https://schema.org",
  "@type": "FAQPage",
  "mainEntity": [{
    "@type": "Question",
    "name": "What happens if a project doesn’t reach its goal?",
    "acceptedAnswer": { "@type": "Answer", "text": "The campaign fails and
every backer can claim a full refund from the contract." }
  }]
}
```

Internal-linking rules

- Every project page links to its category, creator, /how-it-works and /risk-disclosure.
- Every category page links to 3 related categories and the top 6 projects.
- Every blog post links to at least 2 product pages and 2 other posts.
- Use descriptive anchor text (for example “how milestone release works”, not “click here”).

- Footer: Explore, How it works, For creators, For backers, Trust & safety, Fees, FAQ, About, Blog, Contact, and all legal pages.

Content QA checklist before launch

- Each page has a unique title and description, and exactly one H1.
- Every image has meaningful alt text (for example “Student assembling a science kit”, not “image1”).
- All sample data is labelled or removed, and no fake reviews or aggregate ratings exist in structured data.
- Claims such as audited, verified or 94% on time are true and backed by evidence.
- Run the pages through Google’s Rich Results Test, PageSpeed Insights and Search Console after deploying.
